

### Possible Risks, Hazards, or Complications

- **Pain:** There can be pain even after the topical anesthetic has been used. Anesthetics work better on some people than others.
- **Infection:** Infection is very unusual. The areas treated must be kept clean, and only freshly cleaned hands should touch the areas. See "After Care" sheet for instruction on care.
- **Uneven Pigmentation:** This can result from poor healing, infection bleeding, or many other causes. Your follow-up appointment will likely correct any uneven appearance.
- **Asymmetry:** Every effort will be made to avoid asymmetry, but our faces are not symmetrical so adjustments may be needed during the follow-up session to correct any unevenness.
- **Excessive Swelling or Bruising:** Some people bruise or swell more than others. Ice packs may help reduce the swelling. The swelling or bruising typical disappears in 1-5 days. Some people don't bruise or swell at all.
- **Anesthetics:** Topical anesthetic are used to numb the area to be tattooed. Lidocaine, Prilocaine, Benzocaine, Tetracaine, and/or Epinephrine cream and/or liquid are used. If you are allergic to any of these, please inform me now.
- **MRI:** Because pigments used in Permanent Cosmetic procedures contain inert oxides, a low level magnet may be required if you need to be scanned by an MRI machine. You must inform your MRI Technician of any tattoos or permanent cosmetics.

**The alternative to these possibilities is to use traditional cosmetics and NOT undergo the Micro Pigmentation/Permanent Makeup procedure.** I certify that I have read or have had read to me the contents of this form. I understand the risks and alternatives involved in this procedure(s). I acknowledge that I have reviewed and approved the material give to me, and I authorize the licensed professional at Invigorate to perform on my body the Micro Pigmentation/Permanent Makeup/Semi-Permanent Makeup procedure desired today.
